

EXPERIENCE

Scaler AI Labs

Feb 2026 – Present

MTS Intern

Bengaluru, India

- Built 10+ production-grade computer-use RL environments (including Grafana ,Sage ,Netsuite ,Zoho ,Adobe) in Python and FastAPI, shipped to (OpenAI / Meta / xAI) for autonomous-agent training and evaluation.
- Cut PII-scrubbing pipeline runtime **10x** — **24 hrs to under 3 hrs on 5 TB** of environment interaction data by scaling the worker pool from **800 to 8,000**; unblocked the scale-up by replacing single-source manifest distribution with a **tree-based fan-out** (each tier seeding the next: $1 \rightarrow 10 \rightarrow 100 \rightarrow \dots$), eliminating the bandwidth bottleneck that had capped concurrency, and enabling same-day handoff to partner labs.
- Owned the Python capture/analysis backend and Next.js dashboard for a **Tauri** employee-activity monitoring desktop app (4-engineer team), ingesting periodic screenshots and OS accessibility (AX) trees to classify in-app user activity.
- Ported the capture agent from macOS to Windows, where the native accessibility tree returned substantially sparser element data; restored macOS-level context fidelity by layering additional property and child-traversal queries per node, keeping the downstream activity classifier unchanged.
- Designed analytics APIs over PostgreSQL and ClickHouse serving operator dashboards for large-scale workflow data, moving heavy aggregate queries off Postgres into ClickHouse to keep dashboard loads responsive as event volume grew.

Ticker360

Nov 2024 – Feb 2025

Founding Engineering Intern

Remote

- Sole engineer alongside the cofounder on a greenfield AI stock research platform — took it from landing page to **500+ users**, owning the Next.js frontend, Go backend, data pipelines, and deployment.
- Built low-latency **Golang (Gin)** APIs over **NASDAQ/NYSE** equities, fetching concurrently from two market-data vendors via goroutine worker pools, backed by cron-scheduled MongoDB ingestion pipelines (prices, fundamentals, news) with indexing tuned to read patterns.
- Built the Python AI research service — **token-streamed** chat and a **tool-calling agent with database access** — letting users query equities in plain English, with structured chart specs rendered as inline visualizations; served via **ISR/SSG** Next.js routes with access/refresh token auth. Dockerized on DigitalOcean.

PROJECTS

Conflux

Tech: TypeScript, WebSockets, Yjs (CRDT), Monaco Editor

- Built a real-time collaborative code editor using CRDT-based synchronization for conflict-free multi-user editing.
- Designed a room-based WebSocket architecture enabling low-latency collaborative coding sessions.
- Integrated Monaco Editor to provide a VS Code-like development experience inside the browser.
- Enabled secure multi-language code execution using sandboxed execution APIs.

CraveStream

Tech: React.js, Node.js, Express.js, MongoDB, TailwindCSS, JWT

- Developed a TikTok-style food discovery platform with vertical video feeds and optimized media delivery.
- Implemented JWT authentication with HttpOnly cookies to improve application security and reduce XSS risks.
- Designed role-based access control (RBAC) for users and content partners.
- Solved CORS and distributed authentication challenges across Vercel and Render deployments.
- Integrated ImageKit for optimized media storage and low-latency streaming.

EDUCATION

Scaler School of Technology

Jul 2023 – Jul 2027

Undergraduate Program in Computer Science

Bangalore, India

* CGR: **7.24**

Birla Institute of Technology and Science, Pilani

Jul 2023 – Jul 2027

B.Sc. (Hons.) in Computer Science

INDIA

* CGPA: **6.83**

TECHNICAL SKILLS

Languages	Golang, Java, Python, JavaScript, C++
Backend & Frameworks	Spring Boot, Node.js, Express.js, FastAPI, Gin
Frontend	React.js, Next.js, TailwindCSS
Cloud & DevOps	DigitalOcean, Render, Vercel, Docker
Distributed Systems	WebSockets, CRDTs, REST APIs, Concurrency
Databases	PostgreSQL, MongoDB, MySQL, ClickHouse
AI & Data	OpenAI API, CrewAI, Reinforcement Learning
Core Concepts	System Design, OOP, DBMS, Operating Systems
Tools	Git, GitHub, VS Code, Linux
